(i) ENGLISH PAPER – II

MAXIMUM MARKS :30
ANSWER ALL QUESTIONS

1. Read the following passage and summarize it :

There are times when the night sky glows with bands of colour. The bands may begin as cloud shapes and then spread into a great arc across the entire sky. They may fall in folds like a curtain drawn across the heaven. The lights usually grow brighter and then suddenly dim. During this time the sky glows with pale yellow, pink, violet, blue and red. These lights are called the Aurora Borealis or the Northern lights.

The solar particles from the sun enter the Earth's magnetic field and collide with gas particles in the Earth's atmosphere. These collisions create the Northern Lights.

The kinds of particles bumping into each other determine the colours of the Northern lights. If the solar particles collide with oxygen, the lights produced might be green or yellow. When the solar particles run into nitrogen, the lights tends to be red or blue. How fast the particles are moving determine the size and shape of the lights.

In ancient times people were afraid of the lights. They imagined that they saw fiery dragons in the sky. Some even concluded that the heavens were on fire.
